

## DENTAL MONTH IS FEBRUARY, 10% DISCOUNT COUPON

Dear Client,

Bad breath, pawing at the mouth, difficulty eating and chewing food, are but a few of the symptoms of poor oral health. Ignored, they can lead to gum inflammation and periodontal disease, which is caused by infection from plaque and tartar build-up on pets' teeth. If addressed promptly, the early stages of gingivitis can be treated and the condition reversed. However, if allowed to progress, irreversible periodontitis can occur along with chronic bacterial infection, which can enter the bloodstream and may damage the kidneys, liver and heart.

Periodontal disease is one of the most prevalent diseases seen by veterinarians. It is also one of the easiest to prevent.

### Signs and Symptoms

- Persistent bad breath
- Sensitivity around the mouth
- Pawing at the mouth
- Loss of appetite
- Plaque (often not visible unless stained)
- Bleeding, inflamed or receded gums
- Tartar (creamy-brown, hard material)
- Loose or missing teeth
- Difficulty eating and chewing food

We are always striving to provide the best care for our clients pets. Our Technician staff is performing a **free** oral exam and instruction on how to brush your pets teeth. If need be our veterinary staff is available for consult if your pets show severe dental disease during the free exam. We are offering a **Prevent Dental** which is based on pets between the age of 2-6 yrs of age, also physical exam of teeth and oral cavity and the recommendation of the doctor. With this approach we can help prevent severe dental disease not to mention heart and kidney disease.

We are giving our clients the opportunity to take advantage of this procedure by offering you a 10% discount on the Prevent Dental. You must show this e-mail card at the time of procedure. This offer is valid until 06/30/12.
